

HORNBY® TT120

TT:120

Small World... **BIG Ideas**

Welcome to Hornby TT:120

Hornby TT:120 is a Table Top model railway format that uses an internationally recognised scale of 1:120 or in simple terms, 1/10th of a foot and is a perfect scale for those of all ages who may be limited for space.

Currently, the mainstream UK scales for model railways are either '00' or 'N'. With '00' you have the advantage of models being easy to handle but you need space to create a meaningful layout. With 'N' you have the benefit of being able to create a complicated layout in a small space but the models are difficult to handle with ease. However, with Hornby TT:120 you get the best of both worlds.

Hornby TT:120 models can be easily handled by both young and old, plus there is the additional advantage that a reasonably sized and interesting layout can be created on a baseboard which can easily be stored away either under a bed, behind a wardrobe or some other convenient small space.

The current selection of Hornby TT:120 range of locomotives, rolling stock, buildings and track continues to expand with new and exciting models being added to the range on a continuous basis. With the addition of SkaleScenics and the broad selection of track sections, plus additional scenic accessories becoming available on a continuous basis, a model railway can soon evolve into an easily manageable and eye-catching Table Top model railway.

All Hornby TT:120 locomotives and rolling stock are fitted with universally accepted couplings.

Image shows HM7000 app based analogue control uk.hornby.com/hm7000

Actual 00 Gauge Size

Actual TT Gauge Size

Actual N Gauge Size

Hornby TT:120 Size comparison...

As previously mentioned, the two most current scales available in the UK are either '00' gauge (1:76) and 'N' gauge (1:148) are at odds with similar scales available in the rest of the world. For example, the '00' equivalent in Europe and the US is H0 (1:87), while European and US 'N' gauge is 1:160, but the UK 'N' gauge is 1:148. Although the rail spacings are the same in both UK and Europe for both '00/H0' and 'N', the size of the UK models are technically over scale and therefore at odds with the European and US equivalents. Such disparity not only causes aesthetic issues when UK locomotives and rolling stock are placed alongside European equivalents, but this also extends to the layouts as the infrastructure has to reflect either UK scale buildings or European. The '00' and 'H0' scales as well as the UK 'N' versus European 'N' cannot be mixed as the differences simply look at odds with each other.

Hornby TT:120 does not suffer such issues as the scale of Hornby 'TT' in the UK is the same as it is in Europe and the US, consequently locomotives and rolling stock from either continent can be operated together if desired, because not only do the scales match, but also the couplings.

With such compatibility Hornby TT:120 is the logical choice for product range, size and operation.

Getting started using Hornby TT:120...

A Hornby TT:120 train set is the ideal way to start your TT:120 scale model railway collection.

With a variety of starter sets available there is something for everyone, from the beginner to those returning to the hobby.

Both Hornby TT:120 Analogue and Digital Sound sets are available to purchase from www.hornby.com/HornbyTT120 and Hornby TT:120 Stockists.

Analogue & Digital Train Sets

A Hornby TT:120 train set is the ideal way to get started in modelling railways. All Hornby TT:120 train sets can be assembled and operated straight from the box. All sets are supplied with a mains transformer and controller, or a suitable alternative. The track circuit in each of the sets includes a simple oval with siding which can be easily extended in straightforward stages using the Hornby TT:120 Track Extension packs. After assembly it is just a question of placing the locomotive and rolling stock onto the tracks, operating the controller and off you go, it is as simple as that!

Introducing the Inter-City 125 High Speed Train Set with two Class 43 locomotives in a BR Blue and Grey livery with two Mk3 TS coaches, this set is perfect as a starter set for a beginner of the hobby and there is also a version with sound. The set's contents consist of the following: a Class 43 HST power car numbered E43063, a Class 43 HST dummy car numbered E43062, two Mk3 TS coaches numbered E42064 and E42065, a transformer, a train controller, a buffer stop, a full curve, a power straight, a standard straight, a 3rd full curve, a left-hand point, and a re-railer.

Steam Locomotives

A fine and mighty collection of LNER & BR A1, A3 and A4 locomotives are already available in this optimum scale. The most famous locomotive in the world, 'Flying Scotsman', and the most iconic locomotive known for its speed, 'Mallard', are highly detailed replicas of the real-life locomotives. The sleek and streamlined A4s include 'Silver King' in a BR Green livery, 'Falcon' in a deep BR Blue livery, and 'Trigo' in a BR Green livery.

The Rebuilt Princess Coronation Class, affectionately known as the Duchesses, will feature in different liveries and will both include DCC Ready, and sound fitted versions. The three locomotives being produced are 'Duchess of Atholl' liveried in LMS Crimson Lake and both 'Duchess of Montrose' and 'Duchess of Abercorn' in BR Green. The model features a 5 pole skew wound motor and a heavy die-cast chassis and boiler for maximum traction and pulling power.

A small tank locomotive was needed for the range to be used as a shunter or for pulling the already released wagons in 'TT'. Introducing the newly tooled Class J50 locomotives at various stages in their service: an original LNER black liveried locomotive, a BR J50 incorporating a BR early crest and finally, a BR J50 incorporating a BR late crest. The J50 has electrical pick-up on all wheels to offer more consistent running, even at slow speeds, and has the option for digital control if preferred by having a fitting to take a Hornby 6 pin decoder.

NEW

TT3024M BR (Early), J50 Class, 0-6-0T, 68983 - Era 4 **DCC READY** **6 PIN CONNECTION**

Designer: Sir Nigel Gresley | Entered Service: 1939 | Curved Track: Hornby 2nd Radius +/- 310mm+

No. 68983 was built at Gorton Works and entered service in January 1939 under LNER as No. 608. The locomotive's running number was amended under LNER to 8983 in April 1946. After nationalisation in 1948, the locomotive was under BR ownership and was allocated to Sheffield Darnall (SHF) shed in January 1948. It saw another renumbering change to 68983 in July 1950. After 23 years, the engine was withdrawn from service on 24 April 1962.

NEW

TT3025M LNER, J50 Class, 0-6-0T, 2793 - Era 3 **DCC READY** **6 PIN CONNECTION**

Designer: Sir Nigel Gresley | Entered Service: 1930 | Curved Track: Hornby 2nd Radius +/- 310mm+

No. 2793 was one of several locomotives that were built at Doncaster Works. The locomotive entered service in April 1930. As part of the LNER re-numbering scheme in 1946, 2793 became 8976. At the advent of BR nationalisation in January 1948, the locomotive was allocated to Annesley shed (ANN). A year later, in April 1949, BR renumbered the locomotive to 68976. After its withdrawal from service in September 1962, the locomotive became Departmental No. 16 for use as a steam shunter. After 32 years of service, the locomotive was scrapped on 30 May 1965.

NEW

TT3026M BR (Late), J50 Class, 0-6-0T, 68965 - Era 5 **DCC READY** **6 PIN CONNECTION**

Designer: Sir Nigel Gresley | Entered Service: 1926 | Curved Track: Hornby 2nd Radius +/- 310mm+

No. 68965 was one of several locomotives that were built at Doncaster Works. The locomotive entered service in December 1926 as No. 1069. Due to the LNER renumbering scheme, the engine's number was changed to 8965 in January 1946. At the start of BR nationalisation in January 1948, the locomotive was allocated to Stratford (STR) shed. A renumbering change to 68965 occurred in August 1949. After 36 years, 68965 was withdrawn from service on 23 September 1963.

TT3004M LNER, Class A1, 4-6-2, 4472 'Flying Scotsman' - Era 3 **DCC READY** **NEXT18 PIN CONNECTION**

TT3004TXSM LNER, Class A1, 4-6-2, 4472 'Flying Scotsman' - Era 3 **HM 7000** **TXS18 TRIPLE SOUND**

Designer: Sir Nigel Gresley | Entered Service: 1923 | Curved Track: Hornby 2nd Radius +/- 310mm+

'Flying Scotsman' was built in 1923 as one of the A1 locomotives built under the LNER and it is the only member of the class to go on to be preserved. The trials and tribulations faced by 'Flying Scotsman' in preservation have cemented its status as one of the most famous steam locomotives ever built.

TT: 120 Steam Locomotives

TT3005M	BR (Early), Class A3, 4-6-2, 60078 'Night Hawk' - Era 4	DCC READY	NEXT18 PIN CONNECTION
TT3005TXSM	BR (Early), Class A3, 4-6-2, 60078 'Night Hawk' - Era 4	HM 7000	TXS SOUND

Designer: Sir Nigel Gresley | **Entered Service:** 1924 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

Class A1 locomotive, 'Night Hawk' first entered LNER service on the 24th October 1924 as number 2577. Rebuilt in January 1944 as a Class A3, the locomotive would go on to be numbered 78, and then later under the BR numbering system, 60078. 'Night Hawk' was withdrawn on the 22nd October 1962 and later scrapped at Doncaster in 1963.

TT3006M	BR (Late), Class A3, 4-6-2, 60084 'Trigo' - Era 5	DCC READY	NEXT18 PIN CONNECTION
TT3006TXSM	BR (Late), Class A3, 4-6-2, 60084 'Trigo' - Era 5	HM 7000	TXS SOUND

Designer: Sir Nigel Gresley | **Entered Service:** 1930 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

2595 'Trigo' entered LNER service in 1930, being one of the 27 A3 locomotives that never turned a wheel as an A1. The locomotive would go through the same short-lived numbering pattern as its classmates carrying the number 84 for a short time before adopting its longer term BR number of 60084 after nationalisation. Along with all but one other member of the class, 'Trigo' was unceremoniously scrapped in November 1964.

TT3008M	BR (Early), Class A4, 4-6-2, 60016 'Silver King' - Era 4	DCC READY	NEXT18 PIN CONNECTION
TT3008TXSM	BR (Early), Class A4, 4-6-2, 60016 'Silver King' - Era 4	HM 7000	TXS SOUND

Designer: Sir Nigel Gresley | **Entered Service:** 1935 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

2511 'Silver King' was the 3rd Class A4 locomotive to be built and was designed to pull the 'Silver Jubilee' service. The locomotive entered service in November 1935 in the unique LNER Silver livery designed for the service. The locomotive would go on to work under BR before being scrapped in 1965, making it one of the longest serving Class A4 locomotives. 'Silver King' would retain its name even after it had been painted out of its Silver Jubilee livery.

TT3009M	BR (Early), Class A4, 4-6-2, 60025 'Falcon' - Era 4	DCC READY	NEXT18 PIN CONNECTION
TT3009TXSM	BR (Early), Class A4, 4-6-2, 60025 'Falcon' - Era 4	HM 7000	TXS SOUND

Designer: Sir Nigel Gresley | **Entered Service:** 1937 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

4484 'Falcon' entered service with LNER in January of 1937, following the broad early naming format based around Gresley's penchant for birds. The locomotive would go on to be renumbered twice, first to 25 under the later LNER system and then into BR service as 60025 before being scrapped in October of 1963. During its time with BR, the locomotive had an experimental smokebox vacuum gauge fitted as part of the Kylchap exhaust experiments, one of only four to receive the modification. 'Falcon' is an example of the class that kept its name from introduction until withdrawal.

----------------	--	------------------	------------------------------

TT3007TXSM	LNER Class A4, 4-6-2, 4468 'Mallard' - Era 3	HM	7000	TXS	TRIPLE SOUND
-------------------	--	-----------	-------------	------------	---------------------

Designer: Sir Nigel Gresley | Entered Service: 1938 | Curved Track: Hornby 2nd Radius +/- 310mm+

The most famous of the Class A4 locomotives is surely 4468 'Mallard', the locomotive that broke and still holds the world record for the highest speed achieved by a steam locomotive. This record was achieved at the height of the streamlined battle between Gresley's A4 and the Streamline Coronation of Stanier's LMS. 'Mallard' would go onto serve under BR as 60022 before being withdrawn in early 1963, having been earmarked for preservation as early as 1960, its historical significance recognised and understood.

-------------------	--	-----------	-------------	------------	---------------------

Designer: Sir William Stanier | Entered Service: 1938 | Curved Track: Hornby 2nd Radius +/- 310mm+

'Duchess of Montrose' entered service in 1938 in the LMS Crimson Lake livery being numbered 6232. It would wear this livery and number for the entire time it served with the LMS before being adopted into BR as 46232 in 1948. Under BR 'Duchess of Montrose' would wear three different liveries, before being scrapped in November of 1963 at Crewe.

TT3012M	BR (Late), Princess Coronation, 4-6-2, 46234, 'Duchess of Abercorn' - Era 5	DCC READY	NEXT18 PIN CONNECTION
----------------	---	------------------	------------------------------

TT3012TXSM	BR (Late), Princess Coronation, 4-6-2, 46234, 'Duchess of Abercorn' - Era 5	HM	7000	TXS	TRIPLE SOUND
-------------------	---	-----------	-------------	------------	---------------------

Designer: Sir William Stanier | Entered Service: 1938 | Curved Track: Hornby 2nd Radius +/- 310mm+

'Duchess of Abercorn' entered LMS service in 1938 in the LMS Crimson Lake livery. Before nationalisation however the locomotive is said to have been painted into a solid blue-grey colour, the only such example to allegedly receive this paint job however no photos confirm this. 'Duchess of Abercorn' would then go on to be painted in two different liveries under BR and be renumbered from 6234 to 46234. The locomotive would be scrapped at Crewe in June of 1963.

Diesel & Electric Locomotives

TT:120

For those who prefer their locomotive stock to be more modern, the range of Hornby TT:120 Diesel & Electric will not fail to impress. The ubiquitous Class 08 diesel shunter makes an appearance in three different liveries. The first '08', No. D3986, is resplendent in a BR Green livery with the second in the colour scheme of GBRf, while the third is in the bright red livery of DB Rail.

A classic locomotive is the much-loved Class 50, nicknamed by railway watchers as 'Hoovers' because of the distinctive sound they make when in operation. Various liveries of this deceptively powerful model will be produced. The first will be in BR blue with the large white arrow insignia emblazoned on both sides of the locomotive body and is aptly named 'Leviathan'. The second '50' carries the name 'Sir Edward Elgar' with the livery dating back to 1994 when the locomotive was outshopped in the traditional GWR lined green.

There is a selection of Class 66 locomotives in numerous liveries, and what model railway would be complete without the iconic HST?

For the Class 43, 50 and 66 locomotive models, they all feature the following: a 5 pole skew wound motor, dual bogie drive and fully functioning headlights. There is cab lighting with options for night and day running.

NEW

TT3028M BR, Class 08, 0-6-0 D3986 - Era 5 **DCC READY** **6 PIN CONNECTION**

Designer: British Railways | **Entered Service:** 1960 | **Curved Track:** Hornby 1st Radius +/- 267mm+

The Derby built No. D3986 entered service in August 1960 in a BR green livery. This shunter was then officially known by the BR TOPs number, 08818, a number that it was given in February 1974. It served with BR before being transferred to EWS at the onset of privatisation in 1994. Purchased by Harry Needle Railroad Company in 2000, the locomotive was named 'Molly'. As of 2022, HNRC lease the locomotive to GBRf, where the locomotive is still in service.

TT3003M GBRf, Class 08, 0-6-0 08818 - Era 11 **DCC READY** **6 PIN CONNECTION**

Designer: British Railways | **Entered Service:** 1960 | **Curved Track:** Hornby 1st Radius +/- 267mm+

While perhaps recognised as GBRf No.4, this example of the Class 08 shunter was officially known by the BR TOPS number 08818, a number that it was given in February 1974. Initially wearing the number D3986, the Derby built locomotive would serve with BR before being transferred to EWS at the onset of privatisation. Purchased by Harry Needle Railroad Company in 2000, the locomotive was named 'Molly'. As of 2022, HNRC lease the locomotive to GBRf, where the locomotive is still in service.

TT3002M DB Rail, Class 08, 0-6-0 08623 - Era 10 **DCC READY** **6 PIN CONNECTION**

Designer: British Railways | **Entered Service:** 1959 | **Curved Track:** Hornby 1st Radius +/- 267mm+

Originally outshopped into BR service as D3790, this Derby built member of the class began its service life at shed 15C. The locomotive would spend most of its BR days working in the Midlands with allocations to Leicester, Colwick and Burton. Renumbered as 08623 in February 1974, this class member still survives today as a working example of a Class 08 in DB Schenker service some 60 years after introduction.

TT3019TXSM	Colas Rail, Class 66, Co-Co, 66850, 'David Maidment OBE' - Era II	HM	7000 TXS MULTI SOUND

Designer: Electro-Motive Diesel | Entered Service: 2004 | Curved Track: Hornby 2nd Radius +/- 310mm+

Delivered into Newport Docks on board the MV Stellanova in April 2004, 66850 first went into service with Freightliner, before being transferred to operations with Colas in June 2011. In August 2013, 66850 was named 'David Maidment OBE' at the National Track Plant Exhibition at Long Marston, in a naming ceremony honouring the lifelong rail enthusiast and the founder of the Railway Children charity.

TT3020M	GBRf, Class 66, Co-Co, 66789, 'British Rail 1948-1997' - Era II	DCC READY	NEXTRON PIN CONNECTION
TT3020TXSM	GBRf, Class 66, Co-Co, 66789, 'British Rail 1948-1997' - Era II	HM	7000 TXS MULTI SOUND

Designer: Electro-Motive Diesel | Entered Service: 2000 | Curved Track: Hornby 2nd Radius +/- 310mm+

Locomotive number 66789 is a named example of the class, named in honour of British Rail who managed the national network between 1948 and 1997, dates which are also commemorated on the name plate. The locomotive is in the employ of GB Railfreight, who have had the locomotive painted in BR Blue with a large logo and yellow ends, a glimpse perhaps of what a Class 66 locomotive may have looked like in BR service.

TT:120

TT3022M BR, InterCity Swallow Class 43 HST Train Pack - Era 8 **DCC READY** **NEXT18 PIN CONNECTION**
Designer: Sir Kenneth Grange | **Entered Service:** 1978/1982 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

43103 entered BR service in 1978. The locomotive would go on to be painted in the InterCity Swallow livery after the introduction of the service in 1984, this livery took heavy inspiration from the livery of the prototype APT-P. 43103 is still in service today with Cross Country albeit renumbered to 43303 on the installation of its MTU engine, hauling mark 3 coaches modified to meet modern accessibility requirements.

43194 was outshopped in BR Blue and Grey in June 1982 and would be painted into the BR InterCity Swallow livery when the service took over from the InterCity 125 service it would haul upon its introduction. 43194 is still in service with Great Western Railway running as part of one of its 'Castle' sets.

TT3021TXSM BR, Class 43 HST Train Pack - Era 7 **HM 7000** **TXS TRIPLEX SOUND**
Designer: Sir Kenneth Grange | **Entered Service:** 1977 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

43062 was built in 1977 and entered service on high speed services in the same year. After a long BR career the locomotive would go on to become part of the Network Rail New Measurement Train and is now responsible for hauling the most important of trains around the country inspecting trackwork, when not in service the locomotive is stored at Derby RTC.

43063 was also built in 1977 and entered BR high speed services the same year. The locomotive would be assigned to the Landore shed in Swansea in recent times before being withdrawn from GWR service, the locomotive is currently stored awaiting its fate in whatever form that takes.

Designer: Sir Kenneth Grange | **Entered Service:** 1982 | **Curved Track:** Hornby 2nd Radius +/- 310mm+

43188 entered traffic on the 13th May 1982 in the BR InterCity 125 livery, initially being allocated to Old Oak Common. Between its BR and GWR service the locomotive saw use with First Great Western in the divisive gold stripe and fading green livery. 43188 would be named 'Newport Castle' in January 2022.

43187 entered traffic on the 1st May 1982 with British Rail. In later life the locomotive also served with First Great Western before becoming part of the GWR Castle fleet. Running without a name for much of its service life, the locomotive would be christened Launceston Castle in October 2019.

Coaches & Wagons

TT120

To accompany the locomotives, several coaches and wagons are on offer to complete your layout. The rolling stock will span several eras over the defined railway history of Britain, ranging from classic to modern.

A selection of BR Mk1 coaches and Pullman cars are available, of which some new offerings are first class kitchen cars named 'Medusa' and 'Iolanthe'. These are closely followed by Stanier Period 3 coaches in both BR and LMS colour schemes. Moving to a modern era and due to be available early this summer, we have BR Mk2F coaches in appropriate liveries for the coach type and at a later date you will be able to add Mk2E coaches into a rake. With regards to the rolling stock to accompany the HST drive units (Class 43), there is a broad selection of Mk3 coaches in an assortment of liveries to match those Class 43s that are now available.

As far as wagons are concerned, an excellent and varied introductory range is on offer covering several eras and will include open wagons, vans, tankers, hoppers, mineral wagons and of course brake vans, all of which will be available in a veritable cornucopia of liveries. I2T tank wagons will be available in BP/Shell and Benzol liveries. Three TOUAX Sffgmss IFA wagons will be available with a 45' container as a load in three different liveries: DFDS, Hapag-Lloyd and HANJIN.

Future Releases

The Hornby TT:120 range will continue to expand with new and exciting models steadily being introduced over subsequent months.

Hornby TT:120 faces a positive future with more and more locomotives and rolling stock being added to the range. There are several new models currently in development, most notably the Class 37 in miniature form, which can be seen in the render below.

For updates on future developments, please visit our Hornby TT:120 development blog called Train Terminal on our official website, or you can look out for key models on our YouTube channel.

HM DCC 7000

REVOLUTIONISING THE CONTROL & OPERATION OF MODEL RAILWAYS

Although DCC offers many advantages over conventional DC control there are still several disadvantages. With the currently available DCC systems good and consistent control relies on the command signals being passed down the track to the chosen locomotives. Any break in the command signals reaching the chosen locomotive due to poor track connections or possibly dirt on the track can result in the model stalling. This can be quite frustrating especially if the locomotive has to go through a start up sequence before moving off once more.

Changing a locomotive's CV (Configuration Variables) settings can also become a challenge as normally models have to be lifted from the track and placed on a Programming Track before CVs can be changed. Changing a locomotive's CV settings while still on the layout can result, annoyingly with all locomotives being affected by the change, however Hornby are once again on the cutting edge of innovation and operating a model railway has entered a new age of control.

The HM7000 model railway control series offers many advantages over the existing old style DCC units. Firstly, it uses an app based Bluetooth® protocol and can be downloaded on to the majority of available smart 'phones and tablets, which in turn can then be used to control a model railway. No more expensive Command Base units as the HM7000 app is totally free, just scan the HM7000 QR code and follow the instructions. It is that simple.

Secondly, there are 3 available sound decoders - 21 pin, Next 18 pin and 8 pin decoders. Each decoder is Bluetooth® enabled and is supplied complete with detachable sugar cube speaker and multi sized sound box to provide maximum depth of sound, given the available space. Initially, there are in excess of 30 free downloadable sound files to suit the more popular steam, diesel and electric locomotives with each file having in excess of 20 individual sounds.

For those who prefer to run silently, there are 4 non sound Bluetooth® decoders - 21 pin, Next 18 pin, 8 pin and 6 pin.

Each of the Bluetooth® decoders, be they sound or non-sound incorporate a mini socket that allows for the fitting of an HM7070 Power Bank module. The Power Bank provides up to 9 seconds of backup power should the locomotive encounter a power outage due to dirty or poor track work.

The versatility of the new Hornby HM7000 Bluetooth® enabled control system is superbly highlighted with the numerous and low cost ways that any existing layout, either DC or DCC can be controlled using the power of the HM7000 system while wholeheartedly embracing Bluetooth® technology.

- Full Bluetooth® wireless control via APP based control interface
- Over the Air (OTA) updates to HM7000 decoders
- Bluetooth® mesh architecture for multiple HM device control
- **Free-to-download** app for Android and iOS dedicated for decoder control
- High fidelity Triplex TXS decoders allowing for simultaneous play of multiple sounds including:
 - Backwards compatible with Xpressnet DC control systems
 - Locomotive Sound types for Diesel, Diesel-Electric, Steam, Steam-Electric
- Other advanced decoder features were created to allow enhanced control of the locomotive and the sound system

GET STARTED WITH HM7000 IN JUST FIVE SIMPLE STEPS!

1 Buy HM7000 DCC decoder

2 Scan the QR code

3 Download the **FREE** app

4 Download the **FREE** sounds

5 Start controlling

TT:120 Model Sound Profiles

Using Bluetooth® as the basis for the app, it negates the need for expensive command base units. In the HM | DCC app, each sound profile includes a list of sound, motor, and lighting functions such as brake squeal, shunting mode, and auxiliary lighting respectively. Each sound profile is tailored to a particular

class of locomotive, whether it be steam, diesel or electric. Listed below are the already available sound profiles and the upcoming sound profiles in 2024 that you can look forward to trying with your locomotives on your layout:

SD036 Class A1-A3 'Flying Scotsman'

SD037 Class A1-A3

SD038 Class A4

SD052 Duchess

SD041 Class 43

SD050 Class 50

SD051 Class 66

TT:120 Upcoming Sound Profiles

SD0xx Class 31

SD0xx Class 47

SD0xx Class 67

SD0xx Class 800

SD0xx Class 37

SD0xx Class 60

SD0xx Class 73

The current range of Hornby TT:120 train sets include a standard Hornby DC Controller, however the locomotives are capable of being converted to DCC with the addition of a suitable Next18 DCC decoder. Once fitted the locomotive can be operated via any compatible DCC control system such as those produced by Hornby.

Each set includes an oval of track with siding, however with the addition of Hornby TT:120 Track Extension Packs an impressive model railway layout can be created in easy and straightforward stages as shown on the opposite page.

Should the more adventurous wish to create their own individual layout the Hornby TT:120 track system has multiple track pieces across different radius with more to come.

NEW

TT8044 Level Crossing

This single-track level crossing can be adapted perfectly to suit your layout needs:

- There is an option for alternative modern and steam era gates.
- Different road sections will be available to be clipped on.
- There are additional level crossings to make a double, triple or even quadruple – whatever your choice!
- Any 166mm straight track (TT8002) is suitable to utilise.

TT8001 Power Connecting Track - 166mm

TT8002 Straight Track - 166mm

TT8011 Quarter Straight Track - 41.5mm

Track Extension Packs

For those new to the great hobby of modelling railways, the idea of designing a layout can be quite daunting, especially when faced with different radius curves, which is why the Hornby TT:120 Track Extension Packs were developed.

The Hornby TT:120 Track Packs provide a step-by-step track circuit development in easy and simple stages. For those looking to expand the layouts included in 'The Scotsman' or 'The Easterner' sets, then the first extension pack that can be added would be the TT8031 No.2 Track Extension Pack, which increases the layout so it has a large internal siding. The next pack to add would be the TT8032 which extends the internal siding so it becomes an inner circuit. From there, Track Extension Packs 4 and 5 can be added so that a complete and interesting layout can be achieved as shown in the image below.

Expand your Hornby TT:120 layout with additional track extension packs, buildings and accessories.

TT8030 TRACK EXTENSION PACK

1

Pack contains:
1 x TT8008, 1 x TT8007,
5 x TT8002, 1 x TT8010

TT8031 TRACK EXTENSION PACK

2

Pack contains:
6 x TT8004, 1 x TT8007,
1 x TT8009, 3 x TT8002,
1 x TT8010

TT8032 TRACK EXTENSION PACK

3

Pack contains:
6 x TT8004, 1 x TT8006,
2 x TT8009

TT8033 TRACK EXTENSION PACK

4

Pack contains:
2 x TT8006, 1 x TT8007,
1 x TT8009, 2 x TT8002,
1 x TT8010

TT8034 TRACK EXTENSION PACK

5

Pack contains:
1 x TT8008, 5 x TT8003,
1 x TT8010

TrakMat Dimensions:
1371mm x 1020mm

TT:120 Track Plans

Where do you start with laying down your 'TT' track? How can you organise track pieces for your layout? These are common questions associated with beginners about to dabble in a particular scale. With Hornby TT:120 being ideal for fitting in smaller spaces, the following track plans will enable you to extend your track from a basic oval or allow for alternative types of layouts.

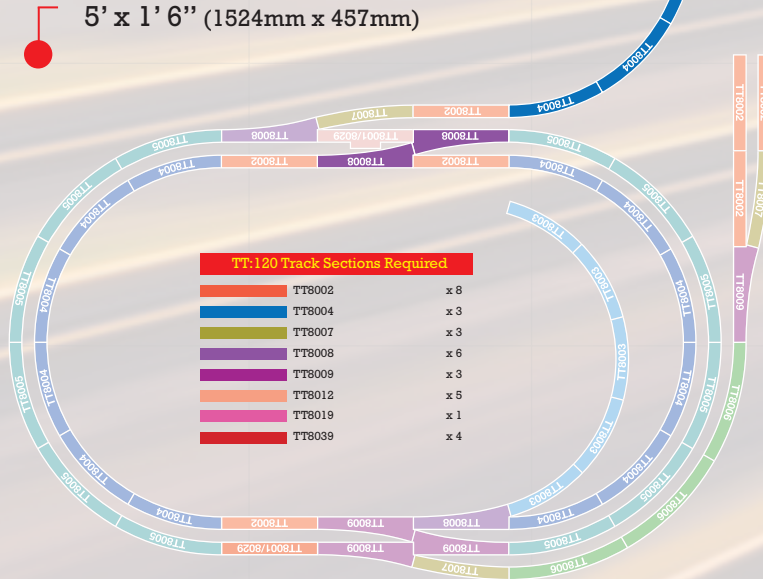

The track plans show TrakMat Extension Pods, Open Ended Extension Pods, Small Full Layouts, Medium Full Layouts and Large Full Layouts. We also offer a free download on our website for the Train Set TrakMat at hornby.com/TT120 which is a great base for your first 'TT' layout.

TrakMat Extension Pods

The following three TT TrakMat Extension Pods will help to extend your 'TT' layout from the baseboard. Extension Pod 1 is 5' x 1' 6" (1524mm x 457mm) and features five track pieces, extending from the starter oval layout. Extension Pod 2 is 3' x 1' 6" (914mm x 457mm) while Extension Pod 3 measures at 4' 6" x 1' (1371mm x 300mm).

TT TrakMat Extension Pod 1
5' x 1' 6" (1524mm x 457mm)

TT TrakMat Extension Pod 2
3' x 1' 6" (914mm x 457mm)

TT TrakMat Extension Pod 3
4' 6" x 1' (1371mm x 300mm)

Small Full Layouts

TT Small Full Layout 1

6' 5" x 3' (1956mm x 914mm)

TT Small Full Layout 2

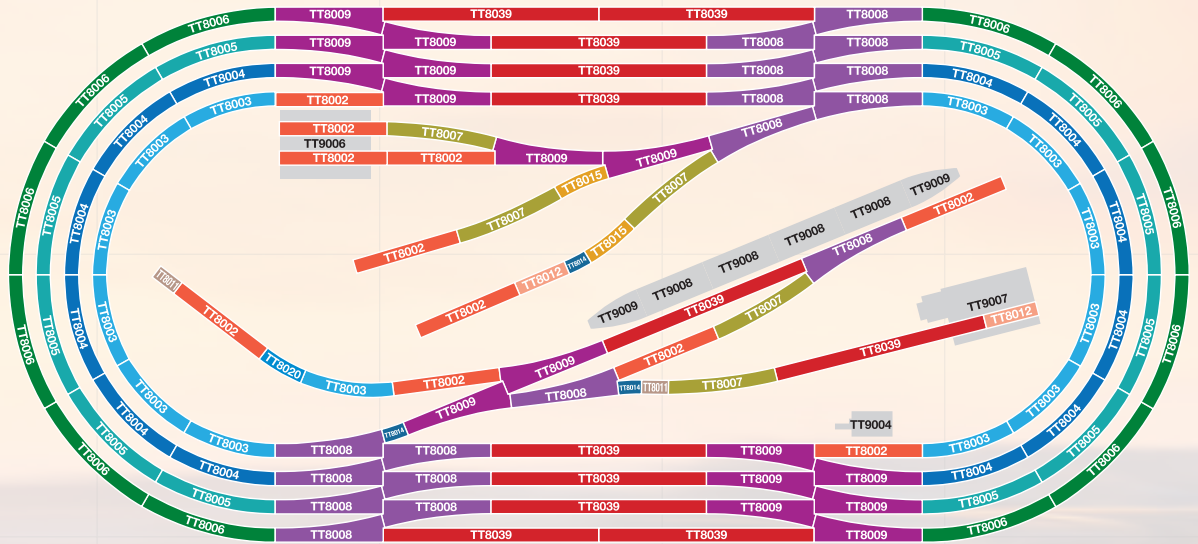

6' 5" x 3' 5" (1956 mm x 1041 mm)

Medium Full Layouts

FREE Train Set TrakMat Download at: hornby.com/HornbyTT120

Get started with your layout on our Hornby TT:120 Train Set TrakMat which you can download for free at hornby.com/TT120. This TrakMat is provided as the ideal base for your Hornby TT:120 layout at any time during the process of creating your desired diorama.

This Hornby TT:120 TrakMat has been designed to be used with the Hornby TT:120 basic oval as well as all 5 extension packs. To print the PDF to scale, you are likely to need to take or send it to a large format printer as it is 1371mm x 1020mm. We recommend that you ask for a matt laminate or encapsulate finish.

Buildings & Accessories

There are numerous Hornby TT:120 buildings planned for introduction over the coming months. Initially there will be a selection of stone effect station buildings and platforms based on those seen on the Settle & Carlisle line, produced from hand decorated resin heralding a whole plethora of structures that will steadily become available as the Hornby TT:120 range extends and will certainly provide even greater variety.

Planned for introduction shortly will be a wide selection of structures, including a church, pub, shops. As time progresses an increased selection of buildings and structures will be appearing including a whole range of ancillary items that provide additional detail to any model railway layout.

SKALE SCENICS

TT, H0 & 00 Gauge Model Railway Scenics

SkaleScenics are perfect for the miniature natural world!

Without a model railway layout being situated in a natural environment, then it is simply just small trains running on a track. However, the moment trees, bushes and ground cover are added then the whole layout transforms and comes to life as a miniature world.

SkaleScenics provides a whole host of high-quality model scenic flora that can be added to a layout as it is being built or if desired later, the decision is entirely up to the modeller.

The SkaleScenics range consists of an extensive selection of high-quality trees, foliage, ground cover (scatter), and ballast. SkaleRoc is the perfect material to create hills, cuttings, and even tunnels. In short, with everything available in the SkaleScenic selection it will be found that there are many different ways to create an ideal environment: be it lush rolling hills, 'ancient' hedgerows, wooded enclaves, urban parks, or just simple suburban gardens. SkaleScenics flora at your fingertips.

Classic Trees

Handmade for finer quality, the SkaleScenics Profi Tree range will bring added scenic detail to any model railway or diorama.

The trunks of the trees are painted by hand so that no shining plastic surfaces are left visible and to give more volume. All of the branches are covered with fine wool before they are flocked. This mimics the leaf shapes and colours of a real tree and, as in nature, only the fine branches of the PROFI trees have leaves, so this is replicated in our range.

R7202	Fruit Trees
80mm Three per pack	

R7203	Maple Trees
90mm Three per pack	

R7204	Beech Trees
130mm Two per pack	

R7205	Birch Trees
45mm Three per pack	

R7206	Large Fir Trees
80-120mm Four per pack	

R7207	Small Fir Trees
40-80mm Four per pack	

R7208	Bushes
30-40mm Five per pack

New releases

This catalogue contains information on items predominantly planned for introduction in 2024. Delivery periods may be subject to variation. The illustrations of such items show Hornby prototype or photo enhanced models which may not conform exactly to production versions.

Distribution

www.hornby.com/HornbyTT120 and selected Hornby TT:120 stockist.

The range shown will be varied in future years.

Enthusiasts are invited to obtain their requirements while they are in current production.

Contents of the 2024 Hornby TT:120 catalogue, correct at the time of print.

Spare parts

Spare parts are available from www.hornby.com.

If for any reason a particular component is not in stock, Hornby will be pleased to order it on your behalf.

Electrical

Locomotive motors operate from 3-12 volts Direct Current (DC). This supply is obtained from house mains through a Hornby Transformer and Train Controller. These are manufactured to British Standards Specifications and are completely safe.

Patents and trade marks

The following British Patents are in force:

HORNBY®, Hornby Railways, are Registered Trade Marks of Hornby Hobbies Ltd.

Some control equipment is not suitable for use by children under 14 years except under adult supervision.

Please check individual product packs for further information. Hornby Hobbies Ltd reserves the right to alter designs, specifications and prices without notice. All dimensions quoted in the catalogue are approximate.

Colour, content and specifications may vary from those shown in this catalogue.

Customer Services

Our team operate a telephone service on +44 (0)1843 233512
which is open Monday to Wednesday 9am - 5pm Thursday to Friday 9am - 3pm

Our team are also contactable via email on customerservices.uk@hornby.com
