

How Does the Hornby Shrinking Booth Work?

The Hornby Shrink Ray is a precision-engineered, quantum-reduction device that seamlessly reduces your size while maintaining all biological functions (so yes, you can still breathe, eat, and enjoy a cuppa at the model café!).

Step 1

Enter the Shrink Chamber

The Shrink Ray comes with a stylish, railway-themed miniaturization chamber—designed to fit neatly into any railway room, hobby den, or even your garden shed. Simply step inside, close the hatch, and prepare for the ride of a lifetime.

Step 2

Select Your Scale

Using the onboard digital interface, you can choose from a range of classic model railway scales, including:

OO Gauge (1:76)

Perfect for standard
Hornby layouts

TT Gauge (1:120)

For an even smaller,
more detailed
adventure

Custom Scaling

Want to be just a little smaller?
No problem!

Step 3

Engage the Shrinking Booth

Once you've set your preferred scale, the quantum-matter realignment process begins. This state-of-the-art technology safely compacts your molecular structure without causing discomfort. In just 30 seconds, you'll find yourself standing at miniature scale, ready to explore your layout like never before.

How Do You Return to Normal Size?

Don't worry—you won't be stuck in your miniature world forever! The Hornby Shrinking Booth comes equipped with a Reversal Function for quick and easy resizing.

Option 1: Auto-Timed Reversal

Set a timer before shrinking, and the booth will automatically reverse the process after your chosen duration.

Option 2: Manual Activation

Simply step into the chamber again, press the "Return to Full Size" button, and in another 30 seconds, you'll be back to your normal self—ready to share stories of your adventure!

Option 3: Emergency Recall

For added safety, a full-sized assistant can initiate the reversal remotely in case you get too caught up in your model-sized adventures.

Are you ready to go small?
The future of model railways is here!
